Patient Colonoscopy Package

STAFF
THE FOLLOWING INFORMATION PERTAINS TO ALL PATIENTS HAVING PROCEDURES AT BARRIE ENDOSCOPY:

- Please arrange for a responsible adult to accompany you to and from your scheduled procedure.
- You are advised not to drive for at least 12 hours after your procedure (preferably not until the next morning).
- Patients are advised to have someone stay with them for at least 12 hours post procedure. Be prepared to stay home for the remainder of the day.
- Do not eat any solid foods, or drink milk, orange juice, or any liquids which cannot be seen through staring at breakfast time the day before your scheduled procedure.
- Do not chew gum or eat candy prior to your procedure.
- Do not consume any alcohol or partake in any recreational drug use for at least 24 hours prior to the procedure.
- Please remove all jewelry, make-up, and nail polish before arriving at Barrie Endoscopy for your appointment.
- Patients are advised to leave all valuables at home as we will not assume responsibility for lost or stolen property during your time at Barrie Endoscopy.
- Please bring a signed copy of the enclosed consent form with you to your appointment.
- Please complete the attached Patient questionnaire form and bring it with you to your scheduled appointment.
- **Bring your health card with you to your appointment.**

*Note: failure to comply with any or all of the previously mentioned item may result in appointment being cancelled at our discretion.*

Cancellations:

If for any reason you need to cancel your scheduled appointment, Barrie Endoscopy requires a minimum of 3 business days’ notice. Failure to comply will result in a $250.00 charge. Patients will not be able to reschedule an appointment until outstanding fees have been paid.

No Shows:

If for any reason patients whom are scheduled for a procedure fail to arrive at Barrie Endoscopy without providing us with notification or reasoning will also be subjected to a $250.00 fee. Patients will not be able to reschedule an appointment until outstanding fees have been paid.
Preventing for the Prep

Before a colonoscopy can occur, you will need to clean out your colon (also known as Bowel Prep). In order for a colonoscopy procedure to be completely thorough and safe your colon must be completely empty. We at Barrie Endoscopy suggest that you stay home during the hours of your bowel prep, as the prep will cause you to frequently visit the bathroom.

Bowel preparation causes frequent loose stools or even diarrhea to ensure that your colon is completely evacuated prior to the procedure. Going through a bowel preparation you may feel some abdominal discomfort/upset, bloating and hunger. Please be sure you have plenty of clear fluids at hand to consumer after the preparation has begun (we recommend sports drink to help replenish electrolyte levels).

In order to partake in a bowel preparation you will need to purchase a few items from a pharmacy of your choice. This items are over the counter and do not require a prescription. Items include:

- 1 box of “Pico-Salax” (2 sachets)
- 1 pack of “Dulcolax”

Other Considerations:

- If you take prescribed medication on a daily basis, please continue to do so unless otherwise directed.
- If you take Iron supplements- please stop taking them 7 days prior to your procedure.
- The day of the procedure you can/should still take your regular morning medication with a small sip of water.
- Going through a bowel preparation you may experience some discomfort, burning or irritation around the anus; if this occurs you can apply a small amount of petroleum jelly (eg Vaseline) to the affected area. You may also consider applying the petroleum based jelly to the area prior to starting the prep in attempt to avoid irritation from occurring.
The Preparation:

- **Two (2) Nights prior** to your scheduled procedure take two (2) tablets of DULCOLAX
- **The Day before** your procedure (at breakfast time) commence a clear fluid diet. Examples of acceptable liquids include but are not limited to:
  - Water
  - Clear broth/soup/bouillon
  - Popsicles and sports drink (Gatorade/Powerade-please avoid red and purple colour as these colors may mimic the appearance of blood during your procedure)
  - Apple Juice, white grape juice, cranberry juice
  - Jello
  - Black tea or black coffee (no cream, milk, whitener)
  - **NO SOLID FOODS, MILK or MILK PRODUCTS.**

Ingestion Times of Pico-Salax (based on scheduled procedure time): Please refer below to determine when you should start:

<table>
<thead>
<tr>
<th>IF YOUR PROCEDURE IS SCHEDULED IN THE MORNING</th>
<th>8:00AM-10:00AM (INCLUSIVE)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Start your preparation at 5:00pm on the day before your procedure by taking the first sachet of Pico-Salax.</td>
<td></td>
</tr>
<tr>
<td>• Fill a mug with 150mL (5 oz.) of cold water</td>
<td></td>
</tr>
<tr>
<td>• Empty contents of one (1) sachet into the MUG (rarely, mixture may heat up –allow to cool before drinking)</td>
<td></td>
</tr>
<tr>
<td>• <strong>STIR</strong> for 2-3 minutes until completely dissolved</td>
<td></td>
</tr>
<tr>
<td>• Take the <strong>second</strong> sachet at <strong>10:00pm</strong>. Follow instructions above for mixing.</td>
<td></td>
</tr>
<tr>
<td>• <strong>YOU MUST DRINK 4-6 large glasses (1.5 liters) of clear fluid, preferably the sports drink, following each sachet.</strong></td>
<td></td>
</tr>
<tr>
<td>• <strong>DO NOT DRINK OR EAT THREE (3) HOURS BEFORE YOUR PROCEDURE.</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>IF YOUR PROCEDURE IS SCHEDULED BETWEEN THE HOURS OF</th>
<th>10:15AM - 4:00PM (INCLUSIVE)</th>

Understanding Colonoscopy
Patient Information and Consent

PLEASE READ, SIGN AND DATE THIS FORM WITH A WITNESS BEFORE ARRIVING TO BARRIE ENDOSCOPY FOR YOUR PROCEDURE. IF YOU HAVE FURTHER QUESTION, PLEASE SPEAK WITH THE NURSE WHEN YOU ARRIVE.

This information sheet includes answers to questions patients ask most frequently. Please read it carefully. If you have additional questions, please feel free to discuss them with the physician who referred you for the colonoscopy, one of the nurses or with the specialist who will perform the colonoscopy, before the examination begins.

What is a colonoscopy?
Colonoscopy is a procedure which enables a specialist to examine the lining of the colon (large bowel) by inserting a flexible tube (that is about the thickness if a finger) into the anus and advancing it slowly into the rectum and colon.

What Preparation is required?
The colon must be completely clean for the procedure to be accurate and complete. You will receive detailed instructions regarding the dietary restriction to be followed and the cleansing routine to be used. In general, preparation consists of either drinking a large volume of a special cleansing solution or several days of clear fluids, laxatives, and enemas prior to the examination. Follow these instructions carefully. If you do not, the procedure may have to be repeated with a different bowel prep. It is important to drink generous amounts of clear fluids up until 3 hours before, and for 6-12 hours after the procedure.

What about my current medications?
Most medications may be continued as usual. But some medications can interfere with the preparation or with the examination. It is therefore best to inform your physician of your current medications, as well as any allergies to medications, well before the examination.

- Aspirin and arthritis pills (also called NSAID’s or anti-inflammatories) can and should be taken up until the day of the procedure
- Anticoagulants (blood thinners) such as Plavix (clopidogrel), Pradaxa (dabigatran), Coumadin (warfarin) and insulin or other injections for diabetes are all medications that indicate that your colonoscopy should be performed at RVH and not at Barrie Endoscopy Clinic, and special instructions must be individualized.
- Iron should be stopped one week before your scheduled appointment.
- Blood Pressure Pills should be taken on the day of your procedure, with a small sip of water.
- Even if you require antibiotics before dental work to protect your heart or valves, recent expert guidelines suggest that antibiotics are not required before colonoscopy.

What can be expected during my colonoscopy?
Colonoscopy is well-tolerated, especially with sedation. If you were not sedated, there can be a feeling of pressure, bloating, or cramping at times during the procedure, but we have a highly trained specialist (anesthesiologist) who will give you medications (one or more anesthetic agents) through a vein to make you sleepy, and will monitor your respirations, heart rate and blood pressure. It is not a general anesthetic, but often patients will have little or no memory of the procedure. It is rare to experience any discomfort from the procedure. You will be lying on your side
or on your back while the colonoscope is advanced slowly through the large intestine. As the colonoscope is withdrawn, the lining is again carefully examined. The procedure usually takes between 15-30 minutes. In some cases, passage of the colonoscope through the entire colon to its junction with the small intestine cannot be achieved. The physician will decide if the limited examination is sufficient or if other examinations are necessary.

**What if the colonoscopy shows something abnormal?**

If your physician thinks an area of the bowel needs to be evaluated in greater detail, a forceps instrument is passed through the colonoscope to obtain a biopsy (a sample of the colon lining). This sample is then submitted to the pathology laboratory for analysis. If colonoscopy is being performed to identify sites of bleeding, the areas of bleeding may be controlled through the colonoscope by injecting certain medications or by coagulation (sealing off bleeding vessels with heat treatment). If polyps are found, they are generally removed. None of these additional procedures produce pain, either during or after the test. Remember, biopsies are taken for many reasons and do not necessarily mean that cancer is suspected.

**What are polyps, and why are they removed?**

Polyps are abnormal growths (they look like small mushrooms or fleshy lumps) on the lining of the colon which vary in size from a tiny dot to several centimeters. The majority of polyps are benign (non-cancerous), but the physician cannot always tell a benign from malignant (cancerous) polyp by its outer appearance alone. For this reason, polyps are removed and sent for tissue analysis. **Removal of colon polyps, at a benign stage, is the most reliable means of preventing colorectal cancer (malignancy).**

**How are polyps removed?**

Tiny polyps may be biopsied off, or totally destroyed by fulguration (burning), but polyps larger that 3 to 5 mms are removed by a techniques called snare polypectomy, with or without use of electrical cauterization. The physician passes a wire loop (snare) through the colonoscope and cuts the attachment of the polyp from the intestinal wall. You should feel no pain during the polypectomy. There is always a small risk that removing a polyp will cause bleeding or result in a burn to the wall of the colon, or a perforation (a hole on the bowel wall). These complication could require emergency surgery.

**What happens after a colonoscopy?**

After a colonoscopy, your physician will explain the results to you or you will receive a written preliminary report. If you have been given medications during the procedure, someone must accompany you home because of the sedation used during the examination. Even if you feel alert after the procedure, your judgment and reflexes may be impaired by the sedation for the rest of the day, making is unsafe for you to drive or operate any machinery. You may have some cramping or bloating because of the air introduced into the colon during the examination. This should disappear quickly with passage of flatus (gas). Persistent pain is very uncommon after colonoscopy and should cause you to seek medical attention. Generally, you should be able to eat normally after leaving the colonoscopy department, but your physician may restrict your diet and activities.

**What are possible complication of colonoscopy?**

Colonoscopy and polypectomy are generally safe when performed by physician who have been specially trained and are experienced in the endoscopic procedures. One rare (approximately 1 time in 500-1000 procedures) complication is a perforation or tear through the bowel wall that will usually require surgery. During the surgery the hole will be closed. A temporary drainage bag (called colostomy) may be required. Bleeding may occur from the site of biopsy or polypectomy. This bleeding is usually minor and stops on its own, or can be controlled through a second colonoscopy. Localized irritation of the vein where medications were injected may rarely cause a tender lump lasting for several weeks, but this will eventually go away. Applying hot packs or hot moist towels may help relieve discomfort. Heart and lung problems during and after colonoscopy are rare. They include low oxygen, lower blood pressure and altered pulse rate. All these parameters are closely monitored during and after the procedure.
Although complication after colonoscopy are uncommon, it is important for you to recognize early signs of any possible complication. Contact the specialist who performed the colonoscopy or go to the nearest emergency department if you notice any of the following symptoms: severe abdominal pain, fever and chills, or rectal bleeding or more than one-half cup. Bleeding can occur 10-14 days after polypectomy, especially if blood thinners, aspirin, or anti-inflammatory agents are started after polypectomy. Check with you specialist when you should start these drugs again.

How accurate is colonoscopy?

Colonoscopy is the “gold standard” for the detection of polyps and cancer. It is the most accurate test, and allows biopsy or removal of growths, unlike any other colon test. Colonoscopy is thought to detect more that 80% of polyps and more than 95% of colon cancers. However, the test is not perfect, and there is a small chance that significant disease, and even cancer or rare occasions, can be missed. Bowel cleansing is critical.

If symptoms of concern persist or recur, you just speak with your physician.

Because education and information are important parts of comprehensive medical care, and help to relieve anxiety, you have been provided with this information to prepare you for this procedure. If you have questions about your need for colonoscopy or alternative tests, do not hesitate to speak with your physician or your physician’s office staff. If you have questions that have not been answered, please discuss them with the physician who referred you for the colonoscopy, or with one of the nurses or the specialist before the examination begins.

CONSENT

I have read the above colonoscopy information, and understood it adequately. I understand the colonoscopy procedure and the risks associated with the procedure, and the administration of anesthetic drugs, including the risks of perforation, bleeding, infection, subsequent surgery, missed diagnosis of polyps or cancer, and reactions to the medications used. I have had adequate opportunity to ask any and all question about this procedure.

I authorize Dr. ____________________________ to perform the procedure on myself.
